

APC Corporation

American Power Conversion (Nasdaq:APCC) provides protection against some of the leading causes of data loss, hardware damage and downtime: power problems and temperature. Founded in 1981, APC is a leading provider of global, end-to-end AC and DC-based power products and services, including surge suppressors, uninterruptible power supplies (UPS), power conditioning equipment, related software, DC power systems, precision cooling equipment, and consulting services. APC sets the standard for quality, innovation and support for power protection solutions from desktop to data center to entire facilities. Its comprehensive solutions, designed for both home and corporate environments, improve the manageability, availability and performance of sensitive electronic, network, communication and industrial equipment of all sizes.
